

Yegor Brusnyak

Systems Engineer — speech & LLM pipelines

brusnyakyegor@gmail.com · github.com/brusnyak · linkedin.com/in/yegor-brusnyak · Bratislava, Slovakia

SKILLS

AI & speech
LLM APIs, RAG, embeddings, evaluation and regression checks, faster-whisper, CTranslate2, Piper, voice cloning

Back end
Python, TypeScript, Node.js, SQL, FastAPI, PostgreSQL, pgvector, Supabase, WebSockets

Front end
React, Next.js, Svelte, Tailwind CSS

Tools
Git, Docker, Linux, GitHub Actions, pytest, Vercel, Stripe

LANGUAGES

Ukrainian	Native
English	Fluent
Slovak	B2
German	B1

EDUCATION

B.Sc., Information and Communication Technologies (B-IKT)
STU Bratislava, FEI · graduating 2027

Thesis: Real-Time Speech Translation During Online Conferences

SUMMARY

Computer science student (STU Bratislava, graduating 2027). I build speech and LLM systems and measure where they break: latency, accuracy and load, with the numbers published. Looking for part-time or remote engineering work, or a freelance project, while I finish the degree.

PROJECTS

Real-Time Speech Translation — bachelor thesis — in progress

- Live English and Slovak translation with voice cloning for online meetings: VAD, STT, MT and TTS over a WebSocket stream. 38 automated tests.
- Tesla T4 load test: real-time factor 0.18–0.34, first translated audio in 1.1–2 s. One GPU worker served 12 participants (p95 2.6 s), degraded at 16, collapsed at 24. Bottleneck: the single TTS worker, 85–90 % of compute.
- Slovak speech model comparison on CPU: tuned Whisper small 0.26 WER at 2.4 s per clip, versus 0.62 for stock small.

nearpitch — open-source sales agent toolkit — in progress

- WhatsApp agent that quotes only from a typed catalogue, plus a lead-to-outreach loop where a human approves every email. Reply guards and send caps are code, not prompt.
- 69 Python and 17 Node tests; the README lists what does not work yet. MIT.

github.com/brusnyak/nearpitch

AI Recruitment Copilot — personal project

CV/JD parsing to schema-validated JSON, pgvector retrieval with re-ranking, LLM fit scoring, and an evaluation loop for comparing ranking changes. FastAPI, Next.js.

github.com/brusnyak/ai-recruitment-copilot

AgentOps Control Room — personal project

Outbound voice, SMS and email agent workflows with run versioning and regression checks, so a behaviour change traces to a version.

github.com/brusnyak/agentops-control-room

Tracus — live

Local-first German vocabulary capture app with dictionary lookup and a browser extension. tracus.vercel.app

Recareo — voice agent for dental recalls — shut down

Rebooked lapsed patients by voice; enrichment, landing site, Stripe billing. No paying client, so I stopped it and kept the voice and billing code.
