BOT PROOF

VOICE AI · LLM PRODUCTS · AUTOMATION

I build AI tools that solve real problems.

I design and ship voice agents, AI workflows, and product systems that fit real business needs instead of staying in prototype mode.

My work sits between product thinking and engineering: architecture, integrations, tooling, and the details that make a system actually usable.

4+ AI products shipped	B.Sc. Computer Science	5 programming languages	Live AI workflows + bot proof

Projects

Voice AI · Shipped

Recareo

AI voice system that automatically rebooks lapsed dental patients. Includes voice agent orchestration, patient enrichment, a conversion-focused website, and Stripe billing.

Website →

LLM app · RAG

AI Recruitment Copilot

Candidate-to-job matching system using document parsing, embeddings, semantic retrieval, LLM-based scoring, and evaluation loops for a more transparent hiring workflow.

Source → Docs →

AgentOps Control Room

Outbound workflow system for multi-channel campaigns with campaign tracking, run versioning, regression checks, and observability across agent behaviors.

Source → Docs →

Real-Time Speech Translation

Speech translation and voice cloning prototype using Whisper, translation models, and streaming audio pipelines for a live conferencing use case.

Skills

AI & Product

- LLM APIs and orchestration
- Voice AI and speech pipelines
- RAG, embeddings, retrieval design
- MCP, tools, and agent workflows

Languages & Back End

- Python, TypeScript, Node.js
- C, C#, SQL, Rust
- FastAPI, PostgreSQL, Supabase
- WebSockets and event-driven systems

Frontend

- React, Next.js, JavaScript
- Tailwind CSS and product UI
- Landing pages and conversion flows
- Operational dashboards and tooling

Infrastructure

- Docker, Linux, GitHub Actions
- Vercel, deployment pipelines
- Stripe and product integration
- Monitoring, logging, and iteration

Experience

Independent AI Engineer & Product Builder

I build practical AI systems for product, operations, and automation work across voice, search, and workflow tooling.

Contact

Open to AI engineering, voice automation, and product-focused engineering work.

Remote-friendly and available for contract or full-time roles. I work best on systems that combine product thinking, AI, and reliable delivery.
