

Yegor Brusnyak

AI Engineer — speech, LLM evaluation & automation

brusnyakyegor@gmail.com · https://github.com/brusnyak · https://linkedin.com/in/yegor-brusnyak · Bratislava, Slovakia · Open to junior / working-student AI roles and freelance projects

SUMMARY

B.Sc. candidate (STU Bratislava, 2027) who builds voice and LLM systems and measures whether they actually work: accuracy, latency and load, on real GPUs, with the numbers published. My thesis system is benchmarked and open; earlier products taught me what customers will and will not pay for.

PROJECTS

Real-Time Speech Translation (bachelor thesis)

https://github.com/brusnyak/bp
https://brusnyak.github.io/bp/ (benchmark report)

- Slovak↔English live translation with voice cloning for online meetings: FastAPI, Whisper STT, Opus-MT, cloned-voice TTS (OmniVoice / X-Voice), streaming audio pipeline.
- Measured on a Tesla T4: real-time factor 0.18–0.34 with a cloned voice; first translated audio in 1.1–2 s; one GPU worker serves about 12 meeting participants (p95 first audio 2.6 s), degrades at 16, collapses at 24.
- Found the bottleneck (a single serialised TTS worker, ~85–90 % of compute). Slovak output quality judged by ear per setting; 38 automated tests; GPU and load benchmark report published.

AI Recruitment Copilot

https://github.com/brusnyak/ai-recruitment-copilot

CV/JD parsing to schema-validated JSON, pgvector retrieval with re-ranking, LLM fit scoring, interview-question generation, LLM observability, automated eval harness (FastAPI + Next.js).

AgentOps Control Room

https://github.com/brusnyak/agentops-control-room

Run engine for configurable voice/SMS/email outbound workflows with versioning, regression tracking and evaluation (FastAPI + Next.js).

Recareo — AI voice-recall for dental clinics (retired)

2025–2026

Voice agent to rebook lapsed patients, lead-enrichment pipeline, Stripe billing. Demo tested with outreach; no paying customers, so I stopped it. Kept the pipeline code and the lesson: validate buyers before building.

SKILLS

AI / speech: LLM APIs, RAG & embeddings, evaluation harnesses, Whisper STT, TTS, voice cloning, latency/load testing

Engineering: Python, TypeScript, FastAPI, PostgreSQL/pgvector, Supabase, Next.js/React, Docker, Linux, pytest, Stripe

EDUCATION

B.Sc. Computer Science, STU Bratislava (FEI)

expected 2027

Information & Communication Technologies. Thesis: Real-Time Speech Translation During Online Conferences.
