

Yegor Brusnyak

Messaging Bot Developer

Bratislava, Slovakia - Remote contract / part-time - English-first

Email: brusnyakyegor@gmail.com - github.com/brusnyak - linkedin.com/in/yegor-brusnyak

Bot proof page: brusnyak.github.io/cv/bot/ - Demo: youtu.be/hBkcg5dF5OI

Target Fit

Bot/backend builder focused on Telegram, Discord, Slack, WhatsApp-style webhooks, dialogue state, LLM fallback, logging, and human-reviewed outbound workflows. Best fit for roles that need practical messaging-platform integration, bot reliability, and backend API work.

4	channel families shown
2	live bot examples
5	runtime smoke suites
1	shared state graph

Selected Bot Projects

Channel Agent Runtime

Config-driven runtime where Telegram, Discord, Slack, and WhatsApp-style events normalize into one LangGraph state graph for route selection, tool execution, JSONL audit, and approval-first replies.

Stack: Node.js, LangGraph, grammY, discord.js, Slack Bolt, webhooks

Link: <https://github.com/brusnyak/channel-agent-runtime>

Telegram Salon Bot

Appointment-setting Telegram bot with inline keyboard flow, stylist/service/date/time selection, SQLite-backed bookings, admin commands, reminders, and optional operations webhook events.

Stack: Python, Telegram Bot API, SQLite, schedulers, systemd

Link: <https://github.com/brusnyak/telegram-salon-bot>

Discord Moderation Bot

Discord bot with slash commands, warning ladder, tickets, auto-moderation, audit logging, SQLite case history, safe demo incidents, and optional LLM moderation assistance.

Stack: Python, discord.py, slash commands, SQLite, OpenRouter

Link: <https://github.com/brusnyak/discord-mod-bot>

Messaging Bot Ops Lab

Local operations system with provider-shaped webhook intake, persisted conversation state, raw payload visibility, intent/urgency extraction, eval checks, and approval/rejection before outbound replies.

Stack: React, Node.js, webhook intake, outbox queue, eval checks

Link: <https://github.com/brusnyak/jobiz/tree/main/apps/messaging-bot-ops-lab>

Lingonberry Journal

Trading journal product with Telegram bot commands, web dashboard, analytics, TradeLocker integration, and Telegram Mini App style workflow. Shows bot actions connected to real stored workflow state.

Stack: Telegram bot, web dashboard, analytics, TradeLocker, workflow state

Link: https://github.com/brusnyak/lingonberry_journal

Role-Relevant Capabilities

- Telegram via Bot API and grammY/python-telegram-bot.
- Discord via discord.js and discord.py with commands, events, moderation flows, and case history.
- Slack via Bolt Socket Mode in the shared runtime.
- WhatsApp-style inbound webhooks for Meta/Twilio/Hermes-shaped payloads.
- REST/webhook endpoints, OAuth/API integration, async request handling, and deployment handoff.
- Conversation state persisted for review and replay using SQLite/JSONL-style workflow proof.
- LLM-assisted drafting treated as draft behavior with fallbacks, logs, and human approval gates.
- Raw payload visibility and eval checks before risky outbound replies.

Honest Production Boundary

Telegram and Discord proof are live-testable bot examples. Slack auth and send checks are validated in the runtime. WhatsApp work is currently webhook handling and local workflow proof; production sending requires Meta Cloud API or Twilio sender setup, templates, opt-in rules, and account credentials. The demos are portfolio proof and implementation evidence, not inflated enterprise client deployments.

General Engineering Background

- Independent AI engineer and product builder shipping voice agents, LLM applications, and workflow automation.
- Experience with Python, FastAPI, Node.js, React/Next.js, PostgreSQL/SQLite, Docker, Vercel, webhooks, and LLM APIs.
- Bachelor thesis: Real-Time Speech Translation During Online Conferences. Slovak University of Technology, expected 2027.
- Languages: English, German, Ukrainian, Slovak, Russian.
